Climate Change: *First the Science, then the Politics*

A Presentation by Peter Zuris*

Wednesday, December 10, 2014 7-8:30 pm

TO BE HELD AT

Church of the Assumption 20 East Avenue, Fairport, NY 14450

Science extends our minds well beyond the reach of our senses. It has sounded an alarm about the consequences of feeding our insatiable appetite for energy from fossil fuels grown by past suns.

While the science is clear, the politics of global warming are muddled and could well be economically foolhardy. This presentation attempts to clarify science's revelations for non-scientists as prerequisite for political decision making.

*About Peter Zuris: “My credentials are simply that I have a BSME from Virginia Tech in 1964, a 40+ year career moving technology from science to application at Kodak, Corning and a Swiss firm, but mostly nearly insane curiosity about reality and how it works.

“My involvement in learning and teaching climate science is half fascination with it, and half the desire to leave a world to my grandchildren that will allow them similar opportunities to what were given to me by my ancestors.”

THE PROGRAM IS FREE AND ALL ARE WELCOME.
